

JavaScript Components: Practice session

- hide name example at the index grid format column using CSS
 - class="hide" by default
- add some icon to format column (e.g. fa-eye)
- add JS component that will show/hide name example when user clicks on added icon
- (optional) allow to customize which elements will be used as a trigger and show/hide block using component options
- (optional) pass custom options to find a trigger and show/hide block
