

**Extend functionality
with bundles:
Practice session**

- add bundle Training/UserNamingBundle
- decorate Oro\Bundle\LocaleBundle\Provider\EntityNameProvider service
- render name of a User using custom format - "<LastName> <FirstName> <MiddleName>"
- (optional) add block to User view page and render there full name and all name parts (prefix, first name, middle name, last name, suffix)

hint: add listener, scrollData
