

Integrations: Practice session

- add integration channel and transport setting
 - transport entity and form have to accept URL of a place where naming types are stored
- add transport entity with new migration (v1_2)
- Create 2 json files with naming types, ex.
 - Resources/public/test_integration_data/first_names_set.json
 - Resources/public/test_integration_data/second_names_set.json
- create two instances of integrations

HINT: /bundles/trainingusernaming/test_integration_data/first_names_set.json

- (optional) add CLI command that will perform data import
 - use only active integrations
 - get data using the URL from integration
 - create not existing types
 - skip already existing types
