

Workflows: Practice session

- build simple workflow for User entity using YAML configuration
- steps:
 - Name is not initialized (start step)
 - Name parts are set
 - Name format is set
- Transitions:
 - Set name parts:
Name is not initialized > Name parts are set
 - Set name format:
Name parts are set > Name format is set
 - Reinitialize name:
Name parts are set > Name is not initialized,
Name format is set > Name is not initialized

- (optional) add form to “Set name parts” transition:
 - show 5 name parts
 - first name and last name are required
- (optional) add form to “Set name format” transition:
 - show naming format type

- Hints

- Use form_options
- Use form_type: entity (Symfony)
- Make sure that transition definitions are in place (can be empty)
