Storefront and Websites: Practice Session Extended

- Create a controller and define a route accessible from the storefront
  - Empty response
  - Remember about the @Layout annotation
- Create a controller/action and define a route accessible from the storefront via ajax
  - GET product name by id
  - You can call it from <u>browser's console</u>
- (optional) Protect your ajax call by the ACL, so only logged in users can see the result
  - You can create new ACL or use existing one, e.g. oro_customer_customer_user_address_view
